

LIFEVAULT: LIFE ORGANIZED • IPHONE & IPAD

Most apps store files. LifeVault organizes life.

A private, on-device app that organizes the documents, records, and care information for the people, pets, and homes you love — turning scanned documents into structured, connected records that are ready to share the moment they're needed. No account. No cloud required.

Rachel Burgos

Founder — designer & engineer
Designed, coded, and shipped
LifeVault on her own in ~6
months. Houston, TX.

"LifeVault started in a passport office. I'd flown overseas to bring my father, who had Alzheimer's, home — and he no longer had the documents to prove who he was. I built the app I wish I'd had."

— RACHEL BURGOS, FOUNDER

WHY IT'S DIFFERENT

LifeVault organizes information around **people, pets, and households** — not folders. Scan an ID or insurance card and it becomes a **structured, searchable record** with the original attached, linked to the profile it belongs to and ready to share as a polished PDF, **Support Guide**, or **Pet Care Guide** when a doctor, teacher, or sitter needs it.

● Store IDs & documents

On-device OCR for licenses, passports, insurance, prescriptions.

● Profile timelines

Track how a loved one's care changes over time.

● Support Guides

Explain someone's needs once; hand it to anyone who helps.

● Shareable PDF summaries

Send exactly the right information, when it counts.

● Pet Care Guides

Vaccines, meds, and handoff notes for sitters.

● Private by design

On-device, Face ID, AES-256 backups. It's yours.
